RefactorU
Boulder, CO
Full Stack Web Development
Mean Stack

University of New Hampshire
Durham, NH
B.A. Sociology
Minor Business Administration

Profile

I am an aspiring full stack web developer with a passion to solve problems. After years of work in sales, customer service, and claims, I decided to follow my intuition and jump into the world of technology. As a growing full stack web developer I hope to join a hard-working team environment that strives to learn and grow while solving problems using the technology we have at hand.

Tech Project

MyPantry:
MyPantry is a responsive web application built from a blank slate utilizing the MEAN Stack. The application allows users to search for recipes they can make with the ingredients they already have at home. Users save ingredients to their online pantry, and at the click of a button can search over 1 million recipes. The MyPantry search can save time and waste by narrowing down the users search to relevant recipes they can make and help use what they already have at home.
Check it out at: **www.mypantryrecipes.com**
